

Mohd Hamza

Full Stack Software Engineer | Micro-Frontend, Java Microservices, React.js, AWS

+91-9458168106 | mohdhamza750@yahoo.com | Delhi NCR, India | linkedin.com/in/mohd-hamza

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years of experience building end-to-end applications using **micro-frontend architecture with React.js** and **Java Spring Boot microservices** deployed on AWS. Strong experience in designing **scalable, highly available, and resilient distributed systems** within regulated banking environments. Proven ability to deliver secure, cloud-native platforms, and collaborate across architecture, product, and business teams. Actively leverage **Generative AI tools** to accelerate development, improve code quality, and enhance engineering productivity.

CORE TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, C/C++, Shell Scripting
Backend: Spring Boot, RESTful APIs, Microservices, Distributed Systems
Frontend: React.js, Redux, GraphQL, HTML5, CSS3, Micro-Frontend Architecture
Databases: DynamoDB, PostgreSQL, MySQL, Relational (RDBMS concepts), NoSQL Datastores
Cloud & DevOps: AWS (EKS, S3, DynamoDB, Parameter Store), Docker, Jenkins, Harness
Testing & Quality: Jest, React Testing Library, Unit Testing, Automated Testing, SonarQube, Snyk
Observability & Security Tools: Splunk, DX-APM, HashiCorp Vault, CyberArk
AI & Productivity: GitHub Copilot, Cursor, Amazon Q (Generative & Agentic AI)

PROFESSIONAL EXPERIENCE

Analyst Engineer I (Full Stack Software Engineer)
National Australia Bank

Gurugram, India
Jun 2023 – Oct 2025

- Owning and delivering features within the **Enterprise Document Services (Personal Banking)** platform.
- Designed and delivered full-stack enterprise applications using **micro-frontend architecture with React.js** and **Java Spring Boot microservices**, building RESTful APIs on AWS while enhancing distributed systems for **scalability, resiliency, fault tolerance, and high availability**.
- Led enterprise wide rollout of a web platform across **90+ departments**, serving **600,000+ customers**, migrating workloads from on-prem to cloud.
- Delivered UI for the Signature Verification application and optimized backend with multi-threaded batch processing, boosting processing speed and accuracy by **40%** for **22,000+ bankers**.
- Improved backend file handling architecture by replacing base64 payloads with binary streaming, increasing supported file size from **7 MB to 100 MB+**.
- Designed interactive card services UI features for **Kogan, myCard, Qantas, and Edge** brands, delivering optimized user experience across multiple customer facing platforms.
- Implemented CI/CD pipelines, automated testing, and controlled releases using Jenkins and Harness, with integrated **SonarQube and Snyk scans** to ensure every deployment was continuously tested for code quality and security compliance.
- Instrumented applications with Splunk improving observability, production readiness, and incident response times.
- Collaborated with architects, product managers, and business stakeholders to align solutions with enterprise standards, security, and regulatory requirements.
- Used **Generative AI tools** (GitHub Copilot, Cursor, Amazon Q) for code generation, debugging, and documentation, improving delivery speed by **30–40%**.
- **Tech Stack:** Java, Spring Boot, Microservices, React.js, TypeScript, AWS, Docker, Jenkins, Harness, Splunk, DynamoDB, GraphQL.

- **Project: Royal Bank of Scotland (NatWest Group) – Identity and Access Management (IAM) Domain**
- Secured identity authentication workflows (Kerberos, LDAP, PingFederate) across AWS and on-prem PCF, ensuring end-to-end performance and reliability.
- Developed and maintained IAM microservices in Java (Spring Boot), integrating with LDAP and PingFederate for secure authentication and access control.
- Automated operational workflows, sanity checks, and rollbacks using Shell scripting and Ansible, improving deployment efficiency by **55%**.
- Created monitoring dashboards with DX-APM and Splunk to enable predictive monitoring and reduce downtime by **15%**.
- Managed SSL/SAML certificate creation and secure trust configs for uninterrupted microservice connectivity.
- Supported applications across test, integration, and production environments with focus on reliability, security, and compliance.
- Participated in Agile ceremonies, design discussions, and code reviews.
- **Tech Stack:** Java, Spring Boot, IAM, AWS, PCF, Ansible, PingAccess, PingFederate, Splunk, DX-APM, Autosys.

AWARDS & RECOGNITION

Spot Award (NAB, Aug 2025): Led end-to-end development of the JBWere Encryption Application, enabling secure eSign onboarding.

Spot Award (NAB, Nov 2024): Delivered a full-stack application for managing and retrieving customer tax invoices, used by **8,000 bankers** and **400,000+ retail customers**.

Star Performer (NAB, Apr 2024): Integrated **BioCatch** to mitigate fraudulent user behavior.

Certificate of Appreciation (Infosys, Feb 2023): Recognized for delivering critical functionality for Lombard Asset systems.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science & Engineering
Uttarakhand Technical University

Roorkee, India
Aug 2017 – Sep 2021

PROFESSIONAL STRENGTHS

- Experience working in regulated banking environments with strong focus on security, compliance, and enterprise standards.
- Demonstrated **end-to-end ownership** of features and applications, from design and development through deployment and production support.
- Proactively **stepped in to lead and support team members** when required, ensuring delivery timelines and quality standards were met.
- Comfortable taking on **complex technical challenges**, troubleshooting production issues, and driving solutions in high-pressure situations.
- Strong interest in platform engineering, cloud-native systems, and continuous improvement of engineering practices.
